Meet the future. Today.

Enterprise Sponsored Bundles

This solution is perfect for any type and segment of organisation, as it is highly customisable and ensures you are in control of your mobile allocations and expenditure.

Enterprise Sponsored Bundles are ideally suited to Medium Businesses, Corporate Organisations and Government Enterprises as they give a business or department administrator the control to tailor voice, data and SMS bundles according to specific job functions, needs or seniority level.

The administrator can allocate usage limits on an MSISDN (unique number) level, controlling what the business or department sees fit to contribute an individual employees' monthly mobile usage. Usage limits are defined in units (voice minutes, MBs of data and SMS messaging units).

If your employees do not use the allocated units, your enterprise will not be billed, meaning there are no cost implications for the company or users for unused usage. This reduces total wastage for mobile usage and ensures predictable user costs.

| Management and Control:

You can decide what the total bill should be beforehand. Company level allowances can be shared amongst the whole team, with a single monthly bill and detailed management reporting making tracking and reporting convenient and accurate.

- Bundles are activity-based / profile driven – depending on the type of organisation
- Have the flexibility to manage allowances the way you want to.
- Combine users on different devices – Handsets, Laptops, Tablets, etc.
- Real-time allocation of bundles – no need to wait for the next month to enforce changes.
- Cost effective flat-rated bundles, requirements and specific needs - customers can “design” the most feasible plans, developed to their unique business/ department needs.
- Members linked to sponsored bundles are allocated what they are allowed to use per individual.
- This solution empowers you to create your own mobile packages with correct-sized bundles, upfront:
 - Different packages within businesses are no longer required – you have the flexibility to create your own bundles or allocations, not linked to 24-month contracts (ideal for BYOD customers).
 - Enhance current spend limits and provide real-time usage limits for voice, SMS and data usage respectively.
 - Enhancing current spend limits and provide real-time usage limits for voice, SMS and data usage respectively.

| Peace of mind and predictable costs:

One bill, one payment, no unwanted surprise.

- No unpleasant surprises and bill-shocks at month-end – Administrators have complete control during the month with the ability to restrict and adjust users allocations.
- Virtual limits (no usage – no charge).
- Reduce operational costs by eliminating mobile spend wastages.
- No need for optimisation programmes which lead to unnecessary costs (consulting services and benchmarking).
- Effective call rates are lowered – no wastages included in-call rate calculations.
- No inefficiency based on packages with forfeitable bundles (cost benefit).
- Enables adaptability within organisations as there is no need for termination of services with unnecessary cancellation fees and contractual obligations.
